PROJECTS

- **KodeKiddo Website Scraping**
Perform ETL data scraping from company profile websites using Python, parse the extracted information, and import the processed data into structured JSON format, followed by executing data query analysis using PostgreSQL.
- **CuanQ Financial Application UI/UX Design**
Develop a prototype for a financial application called CuanQ, starting with user research and requirement gathering, followed by creating low-fidelity wireframes and progressing to high-fidelity interactive prototypes.
- **Laboratorium Teknik Biomedika Website**
Develop a website for the Laboratorium Teknik Biomedika STEI ITB using NextJS and PostgreSQL, designed to serve both laboratory assistants and course participants. The website includes splash screens, hero pages, and specialized features that support laboratory activities, such as experiment scheduling, equipment lending, and course-related information.
- **Spakbor Hills Game**
Remake and simplify Stardew Valley Game using Java with object-oriented paradigm, focusing on implementation of class, objects, interfaces, threads, polymorphism, and design patterns.
